

Team Number: 011-2

Team Name: The Astrologists

Team Members:

- Katie Miller (k-miller8)
- Brooke Seifert (brookeseifert)
- Sam Kutcipal (samkuts)
- Aleqzander Baker (azb333)
- Brooke Nelson (bnelsonCU27)

Application Name: Stellar Sync

Application Description:

Application to provide users with an interactive platform with personalized daily affirmations, friend compatibility, and recommended songs.

Vision Statement:

For the astrology minded who seek connections and personalized recommendations. Stellar Sync is an application that allows friends to learn about their personalized astrology and that of their friends. Unlike apps like Co-Star, our product also offers tailored music recommendations based on user data.

To create a fun and inclusive space (pun intended) where friends can learn about their astrology and that of their friends.

Version Control (GitHub Repository):

<https://github.com/The-Astrologists/Stellar-Sync>

Development Methodology: GitHub Projects

We are developing our application using GitHub Projects. Since it is built into GitHub, it will be efficient for us to track our progress seamlessly in a centralized environment. Additionally, the Github Projects has an understandable UI that will benefit us as we track our progress.

Communication Plan:

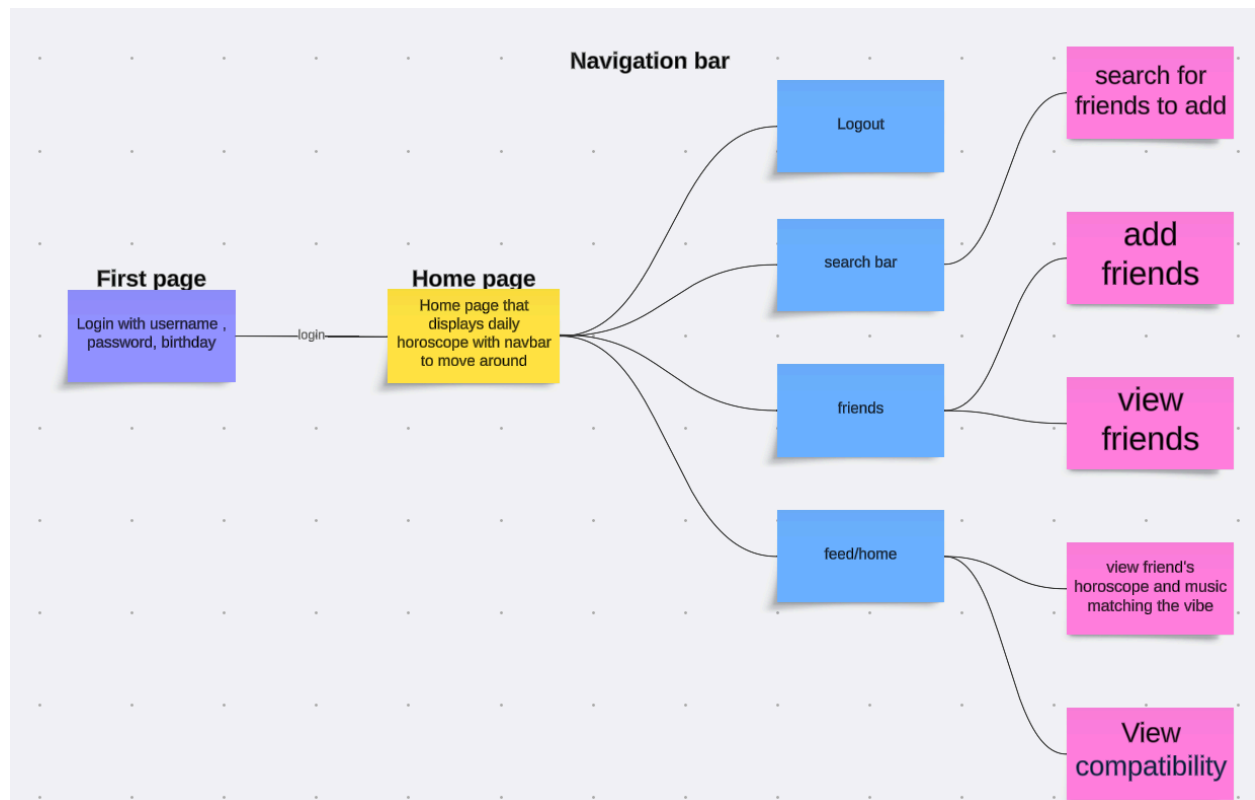

We will collaborate within the team using Discord and iMessage. We will also meet with the TA in person for weekly meetings, and if not all of us can make it in person, we will use Discord or Zoom.

Meeting Plan:

TA: Tuesday 1:30pm to 1:45pm

Team: Fridays 12:00 -1:00 pm (11:00 if you can make it)
